

HW DEVELOPMENT ENGINEER

Your challenge:

As member of our engineering team you design, layout, implement and optimize analog and digital circuits with focus on hardware design.

You provide technical support on system level. You report in accordance with project team objectives, requirements and schedules. Technical support & optimization in production is also part of the job.

Your profile:

- Master degree in electronics engineering
- You have very good experience in analog and digital circuit design
- You preferably have a few years of experience in a similar job
- PCB layout experience is required (e.g. Altium or other)
- Good knowledge in programming languages such as C++, Python, Java, ... and embedded software programming

- A team-player, optimistic and show initiative
- You listen well and seek to understand before reacting
- You are stress-resistant and flexible
- You have strong problem solving and analytical skills
- You work thoughtfully and in consultation to achieve the best result
- You focus on results over processes
- Communicate to the point and fluently in Dutch & English
- Are able to conduct independent study of scientific and technical information
- Willingness to travel abroad for short periods

Extra assets:

- Experience with system integration & architecture definition
- Previous experience in radar systems and or wireless communication
- Experience using various RF test equipment (spectrum analyzers, network analyzers, power meters,...).

Our Assets:

Innovative high-tech working environment - No nonsense corporate culture - Jovial working atmosphere - Optimal education and training possibilities - Excellent remuneration package - Excellent work-life balance
