

RADAR FIELD SERVICE ENGINEER

Your challenge:

As member of our radar-installation team you are responsible for the installation and repair of secondary radar systems on land and ship-platforms worldwide. You are also responsible for factory acceptance test (in presence of the customer) and you organize operational and maintenance training for the customer. Depending on your experience a 3 months training in-house and on-site will be provided.

Your profile:

- Technical Master degree
- Willing to travel
- Customer oriented
- Communicative team-player who shows initiative
- Flexible and strong problem solving attitude
- Training skills
- Communicates and writes fluently in English and Dutch

Extra assets:

- Previous experience in radar systems and/or wireless communication
- Experience with system integration & architecture definition
- Notions of French and German

Our Assets:

Innovative high-tech working environment - No nonsense corporate culture - Jovial working atmosphere - Optimal education and training possibilities - Excellent remuneration package - Excellent work-life balance
